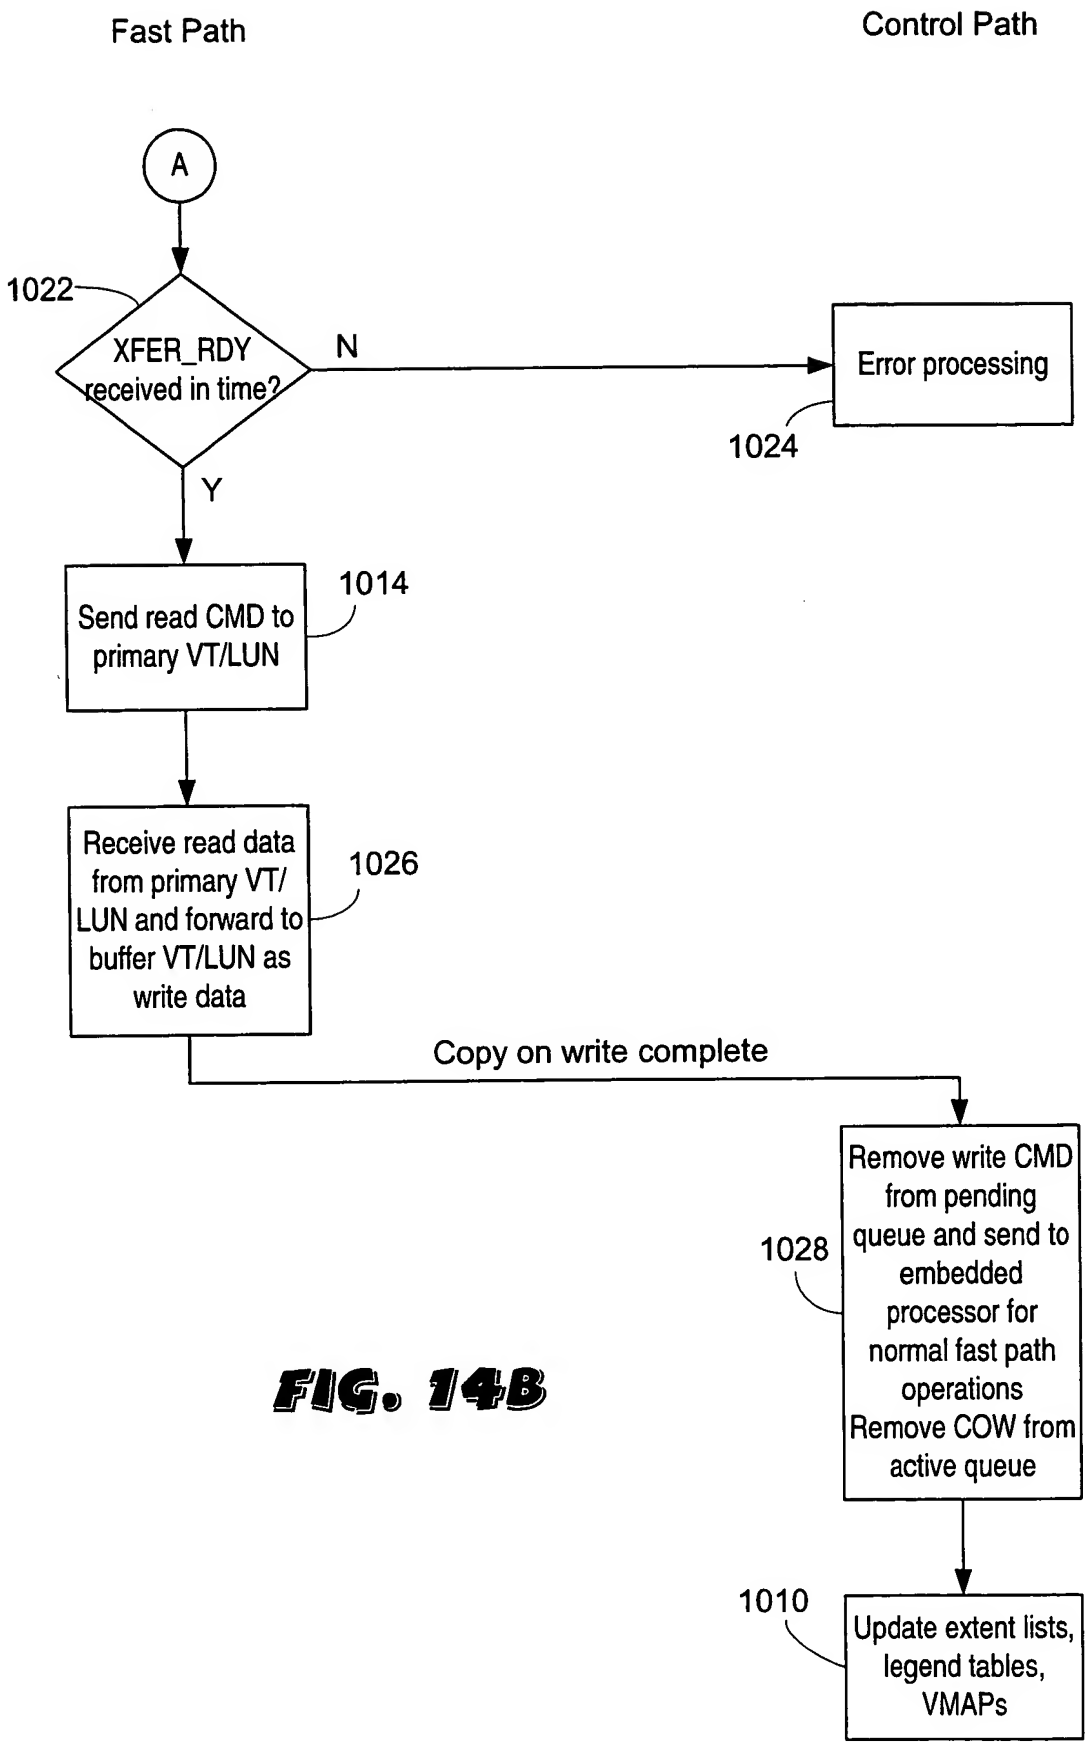
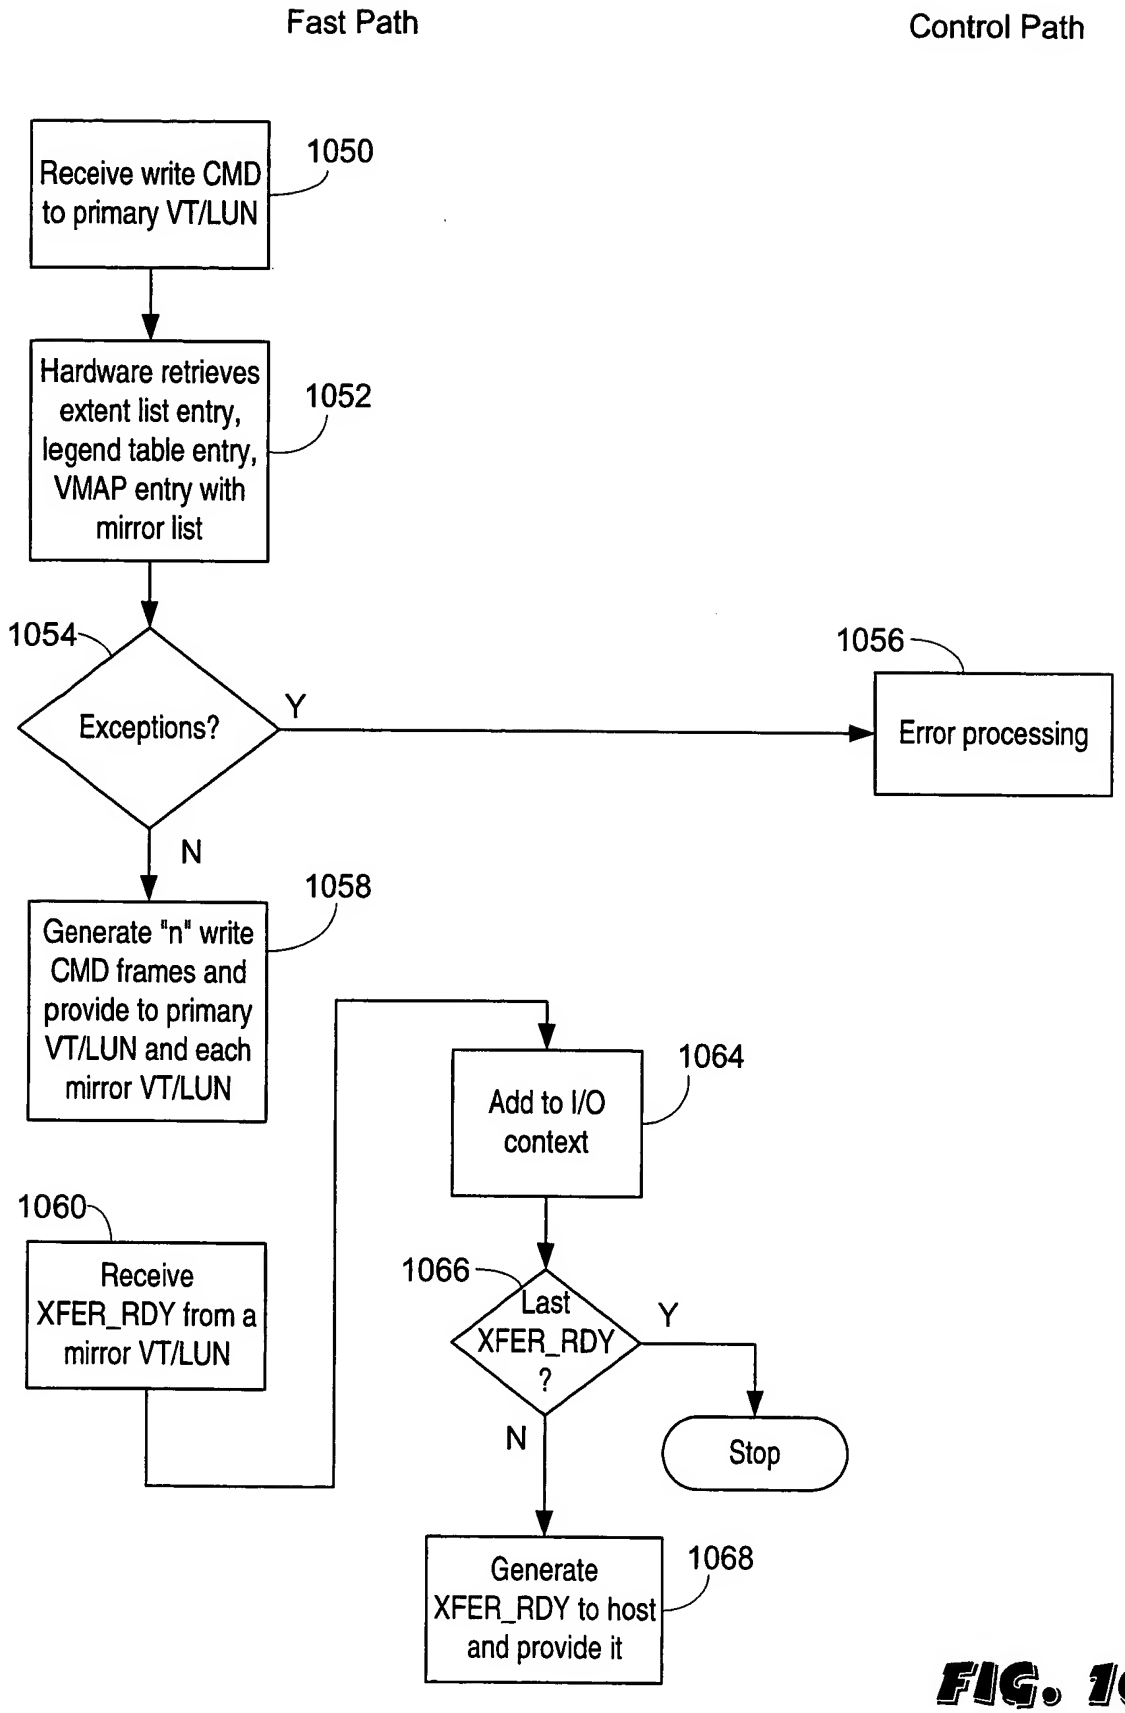
Fast Path
Control Path
Receive write CMD to primary VT/LUN
1002
Hardware retrieves extent list entry, legend table entry, VMAP entry
1004
1006
Fault bit set or lookup error?
Y
N
Perform operation normally
1008
Insert write CMD operation in pending queue and COW in active queue
1012
Copy on write request
Send write CMD to buffer VT/LUN
1020
A

FIG. 14A



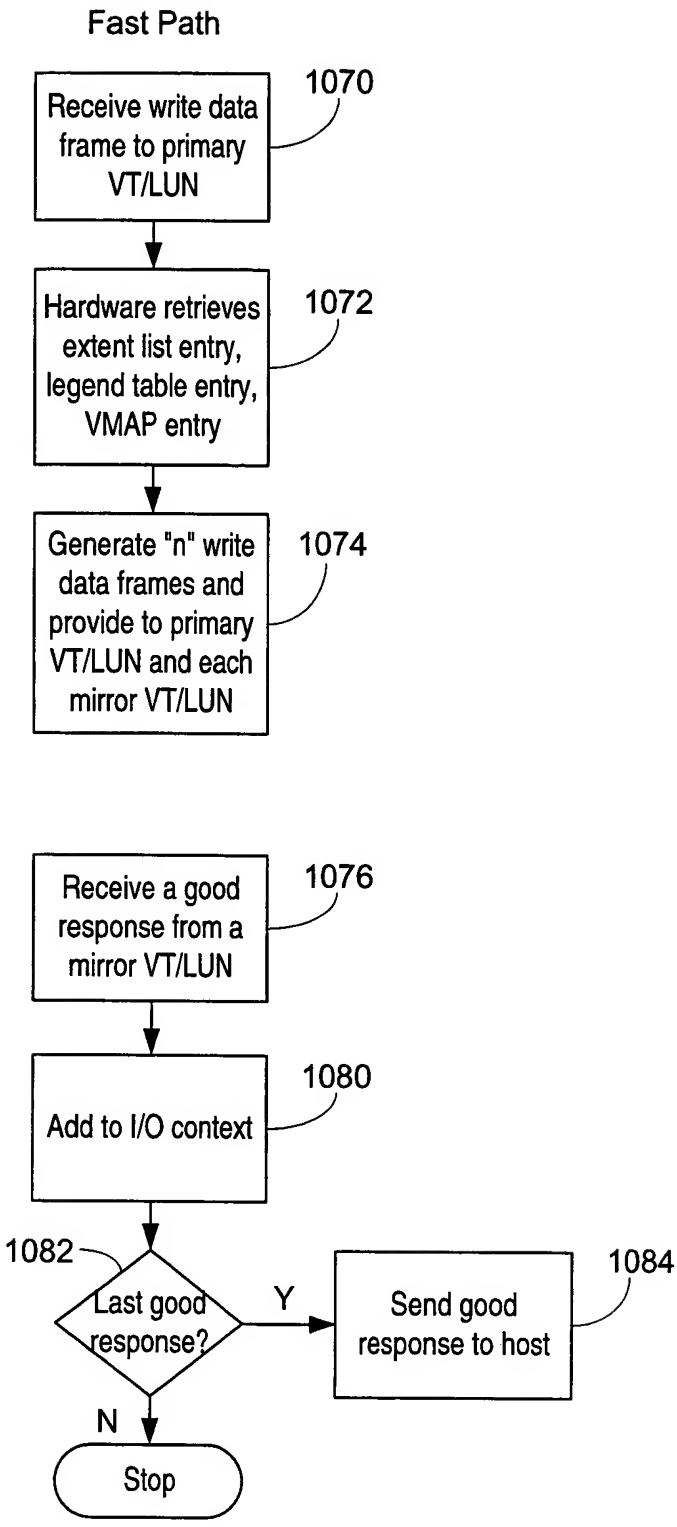
Fast Path
Control Path
A
1022
XFER_RDY received in time?
N
Error processing
1024
Y
Send read CMD to primary VT/LUN
1014
Receive read data from primary VT/ LUN and forward to buffer VT/LUN as write data
1026
Copy on write complete
Remove write CMD from pending queue and send to embedded processor for normal fast path operations Remove COW from active queue
1028
1010
Update extent lists, legend tables, VMAPs

FIG. 14B



Fast Path
Control Path
Receive write CMD to primary VT/LUN
1050
Hardware retrieves extent list entry, legend table entry, VMAP entry with mirror list
1052
1054
Exceptions?
Y
1056
Error processing
N
1058
Generate "n" write CMD frames and provide to primary VT/LUN and each mirror VT/LUN
1064
Add to I/O context
1060
Receive XFER_RDY from a mirror VT/LUN
1066
Last XFER_RDY ?
Y
Stop
N
Generate XFER_RDY to host and provide it
1068

FIG. 16A



Fast Path
Receive write data frame to primary VT/LUN
1070
Hardware retrieves extent list entry, legend table entry, VMAP entry
1072
Generate "n" write data frames and provide to primary VT/LUN and each mirror VT/LUN
1074
Receive a good response from a mirror VT/LUN
1076
Add to I/O context
1080
1082
Last good response?
Y
Send good response to host
1084
N
Stop
